Il soccorso istruttorio nei contratti pubblici. Legittimo affidamento e parità di trattamento.

Tema: Inquinamento ambientale

(INGLESE) I feel pessimistic about the future of the earth because everyday with pollution and global warming we damage it.

For example after 90 years, how life will look like?. It'll be such as now or better than now ? In my opinion it'll be worse than now, because people aren't interested in the future of the planet, the future of our life. Maybe after 90 years life will be better, I hope it will be better but personally I think that in the future there will be more problems than now because if the oil runs out, what will happen? A lot of nation will fall poverty; nation like Saudi Arabia or Libia.

Oil is very important for theE industry because with it we create plastica material, we can use car, bus and other transports, therefore oil industry and all the industries who use oil to create their products will become poor if it finishes. If we don't pay attention to all the problems of the planet, for example pollution, ozone layer, global warming, missing rubbish recycle, in the future life will be more difficult for all the inhabitants of the planet.

Always more people and nationS use alternative energy sources but there isn't enough energy for everyone, we must use renewable energy such as solar panels to make hot water or special light bulbs to save energy, we must do the recycle to save the Earth.

Pollution is one of the biggest problem that we have to face, can we stop it ? In my opinion we can reduce pollution but we can't stop it because we have a lifestyle that we can't stop but we can absolutely change it, and if we do it I'm sure that we will reduce pollution.
